4. RESISTANCE - . RESISTORS AND RESISTOR CIRCUITS - Resistance is the opposition to current flow in various degrees. The practical unit of resistance is called the ohm. A resistor on one ohm is physically very large but provides only a small resistance to current flow. Cable splicing is "the process of connecting two end terminals of cable conductors". Splicing can be performed for joining the cable conductors. This process contains five consecutive steps. They are, 1. Surface preparation?
