6.1 Characteristics of sewage sludge. Most wastewater treatment processes produce a sludge which has to be disposed of. Conventional secondary sewage treatment plants typically generate a primary sludge in the primary sedimentation stage of treatment and a secondary, biological, sludge in final sedimentation after the biological process. Agriculture is the science and art of cultivating plants and livestock. Agriculture was the key development in the rise of sedentary human civilization, whereby farming of domesticated species created food surpluses that enabled people to live in cities. The history of agriculture began thousands of years ago. After gathering wild grains beginning at least 105,000 years ago, nascent farmers ...ORGANIC SEED TREATMENT NOTES. Contact Eli Rogosa Kaufman: 207 872 9093 humus1@netvision.net.il. for research cooperation to test treatments. 1. Preventing Disease in the Field This page was created: to raise awareness about the health and environmental impacts of persistent organic pollutants (POPs), to show what actions the United States and some other countries have already taken to address these pollutants, and
