

# Download Early Psychosocial Interventions In Dementia Evidence Based Practice

There are a number of possible ways to group and categorise interventions in dementia care, for example, by the type of treatment approach used. In this and the following chapter, the main grouping is by the therapeutic goal, with three major domains highlighted: the maintenance of function, including cognitive functions, the management of behaviours that challenge and the reduction of ... Palliative care at the end of life involves meeting the physical, psychological, social, and practical needs of patients and caregivers. End of life is defined as a phase of life when a person is living with an illness that will worsen and eventually cause death. It is not limited to the short period of time when the person is moribund. Good clinical care can prevent or alleviate suffering for ...
