

# Download File Folder Game On Volume

I have a folder in C:\Folder1 I want to copy all the contents of Folder1 to another location, D:\Folder2 How do I do this using a batch file? In NTFS drives, the behavior used to be that, when a file was moved, it would retain the permissions of the original file, if the move was made to a folder on the same volume. I know this by exper... Occasionally, we have the problem that a file has permissions different from the folder where it's in. Now I found out that there's a KB article explaining the reason behind this: . By default, an object inherits permissions from its parent object, either at the time of creation or when it is copied or moved to its parent folder. You might have come across System Volume Information folder in your Windows-based personal computer. But, what is this? Read more and find out.
