I use my HP Pavilion to play games, like roblox, and Internet games. I try to keep low use cpu, but all of it is system. I looked in the other place and system idle was 99-85 CPU. Today, while I was moving my laptop to another place, I felt static electricity when I touched it. The laptop was plugged to the charger. Any idea why this might be happening and more important, is this dangerous for the laptop? Dec 20, 2011: Last Friday Turkish site Donanimhaber published a few slides, one of which revealed release date and official prices of A6-3670K and A8-3870K Accelerated Processing Units (APUs). Two processors will be launched on December 26, priced at \$115 for A6 model, and \$135 for A8 model. AMD today added specifications of these processors to their product database, thus confirming imminent ...???? ??????? ?????? ???. ??? ???? ???? ???? ,???? ,??,??,??, ???,???? ?? ??? ????? ?????? ?????? ????.
