

Download Hydraulic Thumb For Kioti Ck35

I just changed my Hydro/hydraulic fluid and used Mobil hydraul synthetic blend fluid,changed both filters (used Bobcat filters) as I have no dealer nearby.Generally you would use anchor bolts. They're a long, large bolt with no head. In place of the head the shaft is bent into an L shape. When you pour your concrete, do so above grade and slightly dome the top so water will run off, then stick the anchor bolt into the concrete with only the threads exposed above the concrete.
