

Download Pipe Expansion Alignment Guide

Series 9500 Alignment Guides Hyspan Series 9500 Alignment Guides are designed to be installed adjacent to expansion joints and as intermediate guides in steel pipe and copper tube runs to maintain the centerline of the pipe/tube. Note: The alignment guide spacing tabulated in Tables 1 & 2 was calculated in accordance with the recommendations of the Standards of the Expansion Joint Manufacturers Association solely on the basis of the V-Flex spring force. SPIDER10 PIPE GUIDE . The Spider 10 pipe guides are the most popular guides for use with expansion joints. They keep piping in alignment and prevent buckling, but they do not support other significant loads. 26.02 Calculating and Accommodating Pipe Line Thermal Growth 3 In addition, where long length, low pressure applications may require few intermediate alignment guides, the pipe weight,
