The heart is at the center of our circulatory system; an all-embracing network responsible for the movement of blood, nutrients, hormones, oxygen, and other gasses. Circulatory System: Facts, Function & Diseases Credit: Ross Toro, Livescience contributor Diseases of the circulatory system. The circulatory system is made up of blood vessels that carry blood away from and towards the heart. Arteries carry blood away from the heart and veins carry blood back to the heart. The circulatory system carries oxygen, nutrients, and hormones to cells, and removes waste products, like carbon dioxide. We have just finished studying the Circulatory System again. This time we covered the circulatory system in much more depth. We talked about the heart, pulse, blood vessels, blood flow, blood and the components of blood (red and white blood cells, platelets), blood types, cholesterol, and diseases of the circulatory system.
