

Download The Neurobiology Of Learning And Memory

Read the latest articles of Neurobiology of Learning and Memory at ScienceDirect.com, Elsevier's leading platform of peer-reviewed scholarly literature. The Department of Neurobiology and Behavior is made up of a community of faculty, students, postdoctoral fellows and staff who share a common goal: creating an exciting intellectual environment that optimizes our research and teaching missions. Welcome to the Hansel Lab. One of the most intriguing features of our brains is the ability to learn and to adapt. The main goal of our lab is to study the mechanisms underlying the formation of memories. Music is a universal language and powerful force in the world. Watch the 2018 Dialogues Between Neuroscience and Society lecture, in which legendary jazz guitarist Pat Metheny discusses music's impact on the brain; the process of creativity in music, art, and science; and the role of music in healing.
